

How to Measure for your Curtains

MEASURING GUIDELINES-Tools required-Metal tape measure, pen and paper

1. Only use metal tape and record your measurements in cm.
2. Fit the pole or track before measuring to get accurate curtain length. The track or pole should extend beyond the window at either side to allow room for the curtains to be drawn to the side of the window. We recommend between 20-30cm either side of the window.
3. Always measure the width first (across window) and then the drop (top to bottom). Measurements must be exact to ensure a correct fit.
4. Record your measurements Width (cm) x Drop (cm)
5. To fit track/pole

Up to 165cm	132cm (52')
166cm-223cm	193cm (76')
224cm-310cm	264cm (104')

WIDTH MEASUREMENTS for tracks and poles.

Measure the track or pole NOT the window.

For Tracks measure the the width from end to end

If the track overlaps in the middle you must include the overlap

For Poles measure the width between the decorative finials

DROP MEASUREMENTS for tracks and poles.

For Tracks measure from the top of the track to allow it to be hidden by the curtains (see diagram 4)

For poles measure from the underside of the curtain ring to allow the pole to be seen above the curtains (see diagram 5)

For Eyelet curtains measure from the top of the pole and add 4cm

Measure from the correct point to :

- 1cm above the sill length
- the desired length below the sill length
- 1cm above the floor for full length (see diagram 6)
